

Early Life and Adolescent Brain | E-LAB Study

WE ARE RECRUITING!

To learn more about the study
and what taking part involves,
[scan the QR code](#)

WHY?

The study helps us to learn more about how early life experience influences the brain, behaviour, and the immune system later in life

WHO?

Young people ages 13-17 years old who were adopted or separated from their birth parents.

The study invites you and your parent/caregiver to take part in the study.

WHAT'S INVOLVED?

As part of the study participants will have a choice to take part in all or just some of the following modules:

- Psychological assessment
- Online games
- Brain imaging
- Blood sampling
